Household Food Consumption Survey 1955
Report No. 5

FOOD CONSUMPTION of HOUSEHOLDS in the WEST

U. S. DEPARTMENT OF AGRICULTURE

Washington, D. C.

The nationwide survey of household report is based was made in April-June 1955 by the Agricultural Marketing Service and the Agricultural Marketing Service. The work was conducted in by the Household Economics Research Branching Service by the Market Development Branch Research Branch. The data were collected by the Agricultural Marketing Service, Inc., under contract with the Department of Agriculture.

The study represents the cooperative effort of the Department of Agriculture, Faith Clark, Janet Murray, and

had major responsibility for the planning and supervising the assistance of George R. Rockwell, Jr., and Thomas Agricultural Marketing Service. Consultants for the design and analysis of the sample were Earl Houseman and others who gave technical assistance in the preparation of the report. C. Burk, Eleanor Hemm, Robert J. Lavell,

and out under the general direction of the chiefs of the divisions: Gertrude S. Weiss, Robert M. Walsh, and James

DECEMBER 1956

FOOD CONSUMPTION OF HOUSEHOLDS IN THE WEST

Agricultural Research Service and Agricultural Marketing Service

This report contains a portion of the data from the U. S. Department of Agriculture's nationwide Survey of Household Food Consumption made in the spring of 1955. The survey was part of the Department's broad program of research on the marketing and utilization of farm products and on family dietary levels.

Periodic examinations of food consumption of population groups are needed for many purposes -- for administration of public programs affecting food supply, distribution, and consumption; for educational programs to improve food habits; and for private efforts to broaden and improve the marketing of foods. Nationwide surveys of food consumption were made in 1936 and 1942, and a survey of food consumption of urban families in 1948. No surveys of rural families have been made since 1942 except on a regional basis.¹

The 1955 survey was the most comprehensive yet undertaken. Like the earlier surveys, its objectives were to obtain current information on patterns of food consumption, expenditures, dietary levels, and household food practices. The households were grouped (1) by regions--Northeast, North Central, South, and West, (Census of Population regions. See map, p. 2); (2) by urbanization--rural farm, rural nonfarm, and urban within regions; and (3) by several family income classes within region-urbanization categories.

Because of the widespread demand for current data on food consumption patterns, the statistical data contained in this report are being issued immediately after tabulation and accompanied by a minimum of descriptive information. In this way, public and private research and marketing organizations may proceed with analysis of the data for their own use at the same time that studies are being carried on by several research groups within the Department of Agriculture.

The survey was based on a national probability sample of approximately 6,000 housekeeping households of one or more persons. Housekeeping households were defined as those in which at least one member had 10 or more meals from home food supplies during the week preceding the interview. Institutions and persons living on military reservations were not represented.

Collection of the data, made during April, May, and June of 1955, was by personal interview with household members, usually the homemaker. Information was obtained on the number of meals eaten at home and away from home by each individual in the household, expenditures for food eaten away from home, quantities of all food items used at home during the 7 days preced-

¹See page 194 for list of earlier surveys.

ing the interview and expenditures for the purchased items, selected household food practices during the previous year, and various family characteristics such as income needed for classification of the data.

The basic data in this survey relate to quantities of food consumed, or used up during a week. The only exceptions are the figures for certain miscellaneous food items and tea and alcoholic beverages which relate to purchases made during the week rather than to consumption. For these commodities, purchases usually can be reported more readily than consumption. For an individual family there may be a substantial difference between purchases and consumption of a food during a week. Some of the food used may have been purchased earlier and some of the food purchased during the week may not have been consumed until later. For a large group of families, however, average purchases of a food tend to equal average consumption. For this reason, comparisons generally can be made between this survey and other large surveys where food purchases rather than food consumption are measured.

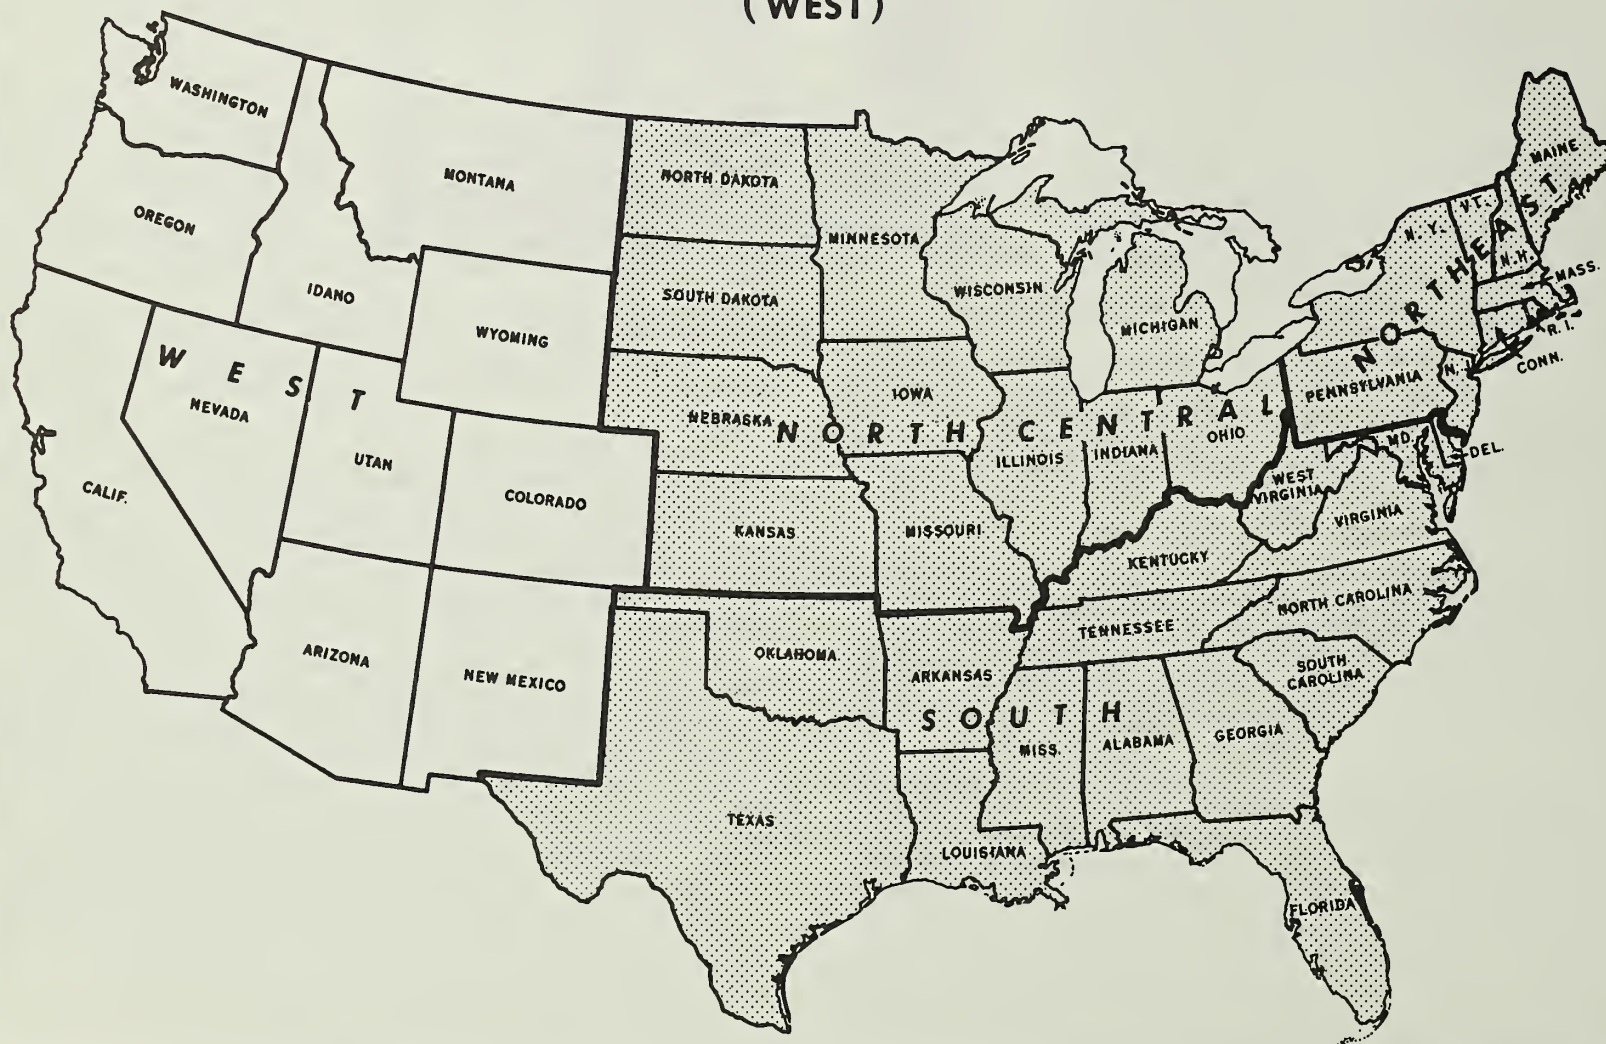

To assure adequate farm coverage the sample included, in addition to a basic cross-section of about 4,500 urban, rural nonfarm, and rural farm households, a supplemental sample of about 1,500 farm-operator households. Hence it was necessary in combining the data for rural farm and the other urbanizations to use appropriate weights in order to obtain the "all-urbanization" averages. A more detailed description of the sample design and its appraisal are presented on pages 184-186.

In requesting the information from households, trained interviewers used a detailed food list to help respondents recall the quantities of foods used during the week and the amounts paid for purchased items. (This method is sometimes referred to as the "recall-list method.") Since the success of surveys of this type depends in large part on the interviewers' skill in drawing out the necessary information from the person interviewed, considerable care was taken in the selection and training of the interviewers. At training schools lasting from 3 to 5 days, instructions and practice were given in the sampling phase of the survey, in interviewing, and in recording in correct form on the schedule. Manuals of instruction, prepared by the contractor and reviewed by the USDA staff, were used in training schools and served as reference tools for interviewers during the collection period.

A glossary beginning on page 191 explains the major terms used in this study.

NOTES ON USE OF TABLES

Table 1 presents the counts of households and families in the survey.

Table 2 presents data on total food expenditures and the money value of food obtained without direct expense for the *family* (primary economic family) and the average size of the family and its income. (See Glossary, Family and Family size.) Where per person averages for groups of families are needed, they may be computed by dividing the family quantities by the average family size (table 2, column 3). This table is the only one in this report that presents data for households or families of 2 or more persons further classified by size. The number of families in some of the family size-income groups is small but averages for these cells are shown to permit maximum flexibility in analyses of the data. Averages for all columns in table 2 are based on all families in the cell (table 1) with the exception of average income (column 2). For this column the averages for all families and for families of 2 or more persons are based on the number of families reporting income (i.e., exclude the "not classified").

The basic data on foods consumed (tables 3-22) are for the *household*. (See Glossary, Household.) Averages in these tables are based on all households in the cell (table 1) whether or not they used the specified food. However, since the percentage of households using the food is shown, averages for these households only can be obtained by dividing the average for all households in the cell by the percentage using.

Where per person averages for groups of households are needed, they may be computed by dividing the household quantities by the average household size (number of "21-meal-at-home equivalent" persons in the household, table 3, column 2.) The use of the number of 21-meal-at-home equivalent

persons for computing averages per person is an attempt to adjust for the fact that the number of persons in the family is not always identical with the number of persons eating from household (home) food supplies. Some family members may have eaten meals away from home and nonfamily members (guests, hired help, boarders) may have eaten from the respondent's household food supplies. This method has the limitation of assigning equal weight in quantity and cost to all meals (morning, noon, and evening), and makes no allowance for any difference between amounts or kinds of food at meals eaten away and those served at home.

The food used at home by households was classified by source, that is, purchased, produced by the household for its own use, or received as gift or pay. For group totals, as in table 4, the percentage, average quantity, and average money value have been shown separately by source as well as for all sources combined. For selected individual foods in tables 6-21, separate figures for food from all sources and purchased food are shown for households in the "all urbanizations" category and for the rural farm and rural nonfarm households. The difference between the figure for food from all sources and the figure for purchased food (except for bakery products and processed fruits and vegetables) gives a satisfactory estimate of home production because the quantities received as gift or pay were small.

Where combinations for groups of families or households are needed, they may be computed by using the counts of households or families shown in table 1. In making combinations, the appropriate adjustments for the oversampling of the rural farm households must be made. For example, in combining income classes for "all urbanizations," columns showing the weighted counts, where this adjustment had already been made, should be used. In combining rural farm and rural nonfarm into a single rural group, the full count of rural nonfarm, but only one-fourth of the rural farm households shown in table 1 should be used.

LIST OF TABLES

| | All urbanizations Page | Nonfarm Page | Urban Page | Rural nonfarm Page | Rural farm Page |

Table 1.--DISTRIBUTION OF HOUSEHOLDS INTERVIEWED IN THE WEST, APRIL-JUNE 1955, BY URBANIZATION, FAMILY SIZE, AND INCOME (continued)

| Household size group and money income after income taxes (dollars) | All urbanizations <u>1/</u> | | Nonfarm | | | Rural farm |
|---|-----------------------------------|-------------------------------------|---------------|-----------------|-------|---------------|
| | Weighted, includes 1/4 farm | Unweighted, includes all farm | All <u>2/</u> | Urban <u>2/</u> | Rural | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) |

6 or more member families

| | <u>Number</u> | <u>Number</u> | <u>Number</u> | <u>Number</u> | <u>Number</u> | <u>Number</u> |
|--------------------------------|---------------|---------------|---------------|---------------|---------------|---------------|
| All families <u>8/</u> | 45 | 64 | 39 | 29 | 10 | 25 |
| Under 2,000 | 2 | 5 | 1 | 0 | 1 | 4 |
| 2,000-3,999 | 10 | 14 | 9 | 6 | 3 | 5 |
| 4,000-5,999 | 20 | 26 | 18 | 12 | 6 | 8 |
| 6,000-7,999 | 4 | 6 | 4 | 4 | } | 5 |
| 8,000 and over | 5 | 7 | 4 | 4 | | |
| Not classified <u>8/</u> | 4 | 6 | 3 | 3 | 0 | 3 |

1/ The sample contains 4 times as many rural farm schedules as are required to provide proportionate representation of all groups. "All urbanizations" is shown both with and without the extra schedules. The effective sample size (i.e. the size a self-weighting sample would have to be to yield the same standard error as the existing sample), which would be used for judging reliability of the tabulated data, is somewhere between the two. The total including all farm schedules is the correct estimate of the effective sample when the standard deviation of the nonfarm data is 1/2 that of the farm. The total including 1/4 of the farm schedules collected is more nearly correct when the standard deviation of the nonfarm data is 1-1/2 that of the farm. Limited evidence from previous studies suggests that this ratio is less than 1 for most items.

2/ Includes a few urban farm families.

3/ Households with primary economic family of 1 person.

4/ Households with primary economic family of 2 or more persons and with no economic family during the week preceding the interview and/or in 1954.

5/ Base excludes the "not classified" group.

6/ The major part of the "not classified" comprises families unwilling or unable to report their income; includes also the few households with no economic family during the week preceding the interview and/or in 1954.

7/ Based on all households of 2 or more.

8/ Excludes those households (2 in total sample, 1 urban and 1 rural nonfarm) in which there was no economic family during the week preceding the interview.

Table 2.--MONEY VALUE OF FAMILY FOOD

WEST

BY URBANIZATION

Average income and family size, average expenditures per family for purchased food used at home and away from home, average money value of food obtained without direct expense, and percentage of families purchasing meals and snacks away from home and percentage having food obtained without direct expense, in a week, April-June 1955; housekeeping households of 1 or more persons, by family size and income (See table 1 for number of households in each family size and income class.)

| Family size group and money income after income taxes for families of 2 or more members (dollars) | Average money income after income taxes (1954) | Average family size (count of members) | Money value of food $\frac{1}{2}$ per family in week $\frac{2}{2}$ | | | | | | | | | Families having food $\frac{1}{2}$ in week $\frac{6}{2}$ | | | | | |

* Less than 0.05 percent, or 0.005 dollars.

1/ Includes alcoholic beverages.

2/ Adjusted to exclude value of food used at home by boarders, farm help, and members of secondary families. No information was requested of respondents on expenditures for food away from home by these nonfamily members of households.

3/ Includes packed lunches and other food carried from home.

4/ Between-meal snacks and beverages; supplements to packed lunches.

5/ Foods obtained without direct expense and eaten at home were valued at prices reported by families in the same region and urbanization group purchasing a similar item.

6/ All families reported expenditures for food used at home; hence, the percentages of families reporting food in columns 4, 5, 6 have been omitted.

Table 3.--HOUSEHOLD SIZE AND TOTAL MONEY VALUE OF FOOD USED AT HOME

WEST

BY URBANIZATION

Average household size and average money value per household and per person of all food used at home in a week, April-June 1955 (based on all households in cell, table 1); food from all sources, purchased food, and food obtained without direct expense (valued at average prices paid for purchased food); housekeeping households of 1 or more persons, by income

** Data not available.

1/ See tables 6-21 for details.

2/ Approximately the quantity of fluid milk to which the various dairy products (except butter) are equivalent in calcium.

3/ Includes small amounts of food received as gift or pay, not shown separately.

4/ Single strength equivalent.

5/ For tea and alcoholic beverages, percentage using and money value refer to purchases during week.

6/ For spices, seasonings, and leavening agents, percentage using and money value refer to purchases during week.

* Less than 0.05 percent, 0.005 pounds, or 0.005 dollars.

** Data not available.

1/ See tables 6-21 for details.

2/ Approximately the quantity of fluid milk to which the various dairy products (except butter) are equivalent in calcium.

3/ Includes small amounts of food received as gift or pay, not shown separately.

4/ Single strength equivalent.

5/ For tea and alcoholic beverages, percentage using and money value refer to purchases during week.

6/ For spices, seasonings, and leavening agents, percentage using and money value refer to purchases during week.

* Less than 0.05 percent, 0.005 pounds, or 0.005 dollars.

** Data not available.

1/ See tables 6-21 for details.

2/ Approximately the quantity of fluid milk to which the various dairy products (except butter) are equivalent in calcium.

3/ Includes small amounts of food received as gift or pay, not shown separately.

4/ Single strength equivalent.

5/ For tea and alcoholic beverages, percentage using and money value refer to purchases during week.

6/ For spices, seasonings, and leavening agents, percentage using and money value refer to purchases during week.

Table 4.--FOOD GROUP TOTALS 1/ (continued)

WEST

RURAL NONFARM

Food used at home in a week, April-June 1955: Percentage of households using and average quantity and average money value per household (based on all households in cell, table 1); food from all sources, purchased food, and food obtained without direct expense (valued at average prices paid for purchased food); housekeeping households of 1 or more persons, by income

* Less than 0.05 percent, 0.005 pounds, or 0.005 dollars.

** Data not available.

1/ See tables 6-21 for details.

2/ Approximately the quantity of fluid milk to which the various dairy products (except butter) are equivalent in calcium.

3/ Includes small amounts of food received as gift or pay, not shown separately.

4/ Single strength equivalent.

5/ For tea and alcoholic beverages, percentage using and money value refer to purchases during week.

6/ For spices, seasonings, and leavening agents, percentage using and money value refer to purchases during week.

* Less than 0.05 percent, 0.005 pounds, or 0.005 dollars.
** Data not available.
1/ See tables 6-21 for details.
2/ Approximately the quantity of fluid milk to which the various dairy products (except butter) are equivalent in calcium.
3/ Includes small amounts of food received as gift or pay, not shown separately.
4/ Single strength equivalent.
5/ For tea and alcoholic beverages, percentage using and money value refer to purchases during week.
6/ For spices, seasonings, and leavening agents, percentage using and money value refer to purchases during week.

SAMPLE

DESCRIPTION OF UNIVERSE

This study of food consumption in the United States was made by interviewing 6,060 housekeeping households of one or more persons. The households were in many parts of the country, in large, medium, and small cities, and in rural farm and nonfarm areas. Excluded are the approximately 4 percent of the population living in rooming houses, institutions such as hospitals and prisons, and other quarters not classified as dwelling units.

To provide reliable statistics on households for the United States as a whole and also for special categories of households such as those in specified income classes, specified regions, and urban, rural farm, and nonfarm groups, the sample was divided into 2 parts. The basic part consisting of 4,556 households was a national, self-weighting, area, probability sample. The supplementary part, made up of 1,504 farm operator households, was selected in the same manner as the basic sample but was limited to the rural area. The tabulations referring to rural farm households alone or in combination with other households include, with appropriate weights, both the basic and supplementary parts of the sample.

DESIGN

The basic sample was drawn by first separating metropolitan areas from nonmetropolitan areas. The metropolitan areas were put into 5 size classes based on the population data of the 1950 Census. Each of the 8 metropolitan areas having 2 million or more people forms a separate stratum. Within each of the other size classes, the metropolitan areas were further grouped into between 3 and 8 geographic areas. The groups were formed so that they had populations of approximately 2 million in each and were made up, with few exceptions, of varying combinations of States within the 4 regions as defined by Census. The distribution by size and region of all the metropolitan areas, and the number of strata formed are as follows:

| <i>Population</i> | <i>Number of metropolitan areas in universe</i> | <i>Number of metropolitan area strata formed</i> |
|--------------------------|---|--|
| All..... | 168 | 32 |
| 2,000,000 and over | 8 | 8 |
| 1,000,000-1,999,999..... | 6 | 3 |
| 500,000-999,999..... | 18 | 6 |
| 250,000-499,999..... | 43 | 8 |
| 50,000-249,999..... | 93 | 7 |
| <i>Region</i> | | |
| All..... | 168 | 32 |
| North east..... | 39 | 8 |
| North Central..... | 1/ 52 | 9 |
| South..... | 1/ 58 | 9 |
| West..... | 18 | 6 |

¹Excludes the metropolitan area of Wheeling, W. Va.; - Steubenville, Ohio; about half the population of the metropolitan area is in the North Central and the other half is in the Southern region.

One metropolitan area was selected from each stratum. In each of the 8 largest metropolitan areas, further classification was made by stratifying cities by size. One city was selected from each stratum; the selection yielded 23 cities. One city was selected from each of 20 other metropolitan areas. The remaining 4 metropolitan areas yielded 2 cities. The cities, 45 in all, were chosen with probability proportional to their 1950 population.

Outside of the standard metropolitan areas, the 605 cities of population 10,000-49,999 were grouped by multiples of State economic areas within Census regions into 15 strata averaging about 850,000 people per stratum. One city was selected from each stratum with probability proportional to its 1950 population.

The distribution of sample cities by size is as follows:

| <i>Size of city</i> | <i>Number of cities selected for sample</i> |
|--|---|
| All..... | 60 |
| Within standard metropolitan areas | 45 |
| 1,000,000 and over..... | 5 |
| 500,000-999,999 | 6 |
| 250,000-499,999..... | 9 |
| 100,000-249,999 | 11 |
| 50,000-99,999..... | 6 |
| 10,000-49,999..... | 8 |
| Outside standard metropolitan areas: | |
| 10,000-49,999..... | 15 |

In the 32 standard metropolitan areas, the 81 counties² (excluding cities of 10,000 or more) in the sample were grouped into 33 strata. The 2,697 counties not in standard metropolitan areas were grouped into 82 strata of contiguous State economic areas, each having about 650,000 persons. One county was selected with probability proportional to that part of its 1950 population which excludes places of 10,000 to 50,000 population.

The distribution by region of the 60 cities and 115 counties in the sample is as follows:

| <i>Region</i> | <i>Cities (number)</i> | <i>Counties (number)</i> |
|--------------------|----------------------------|------------------------------|
| All..... | 60 | 115 |
| Northeast..... | 16 | 20 |
| North Central..... | 19 | 34 |
| South..... | 14 | 47 |
| West..... | 11 | 14 |

Selection of the sample segments (small areas) was accomplished in the cities by numbering all segments in the city and drawing every nth one with probability proportional to the number of dwelling units in the segment. For each county in the sample, a complete listing of enumeration districts (excluding places of 10,000 or more) was obtained from Census. A random sample of these was selected within each county. Each selected enumeration district was further subdivided where necessary into smaller segments and one segment from each enumeration district was selected with equal probability.

²Includes 1 pseudo county made up of 2 adjacent counties.

Two thousand such segments were selected. They were allocated to the various cities and counties taking into account their probability of selection. The basic sample was allocated 1,527 of the 2,000 segments and they were in all sample cities and counties. The other 473 were distributed among the rural areas of the 115 counties.

The dwelling units to be visited within the segments were selected in a random systematic manner. The dwelling units were listed in specified geographic order within each segment. A random number was selected to determine the first sample dwelling unit and each *n*th thereafter was designated for interview; “*n*” was determined by dividing the expected number of dwelling units in the segments by the expected number of units to be visited. Separate rates were computed for the basic and the supplementary samples.

Segments were expected to yield, on the average, 3 interviews—from households in the basic sample and from farm operators in the supplementary segments.

Each household visited was requested to give some descriptive information, and those in which at least one member has 10 or more meals from the household food supplies during the preceding 7 days were requested to give data for the schedule. No substitutes were provided for households unable or unwilling to participate in the survey. In cities of 2,500 or more, interviewers were instructed to call as many as 4 times if necessary to make the original contact. In the less populated places only 3 calls were required.

HISTORY OF VISITS

In the basic sample for the United States, 5,927 dwelling units were visited; 5,625 of the units were occupied. Another 1,608 dwelling units occupied by farm households were visited for the supplementary sample. Of this 7,233 total, 6,792 households (5,207 and 1,585 from the 2 samples, respectively) served at least 10 meals to one or more persons during the preceding 7 days. Schedules were collected from 6,060 (4,605 in the basic sample and 1,455 in the supplementary).

No contact was made with about one-fourth of the 732 eligible nonparticipating households. Neighbors usually were able to provide information on eligibility, but there were a few households for whom eligibility was not determined. These were classed with the eligible nonparticipants. In 9 dwelling units, there was more than one household. For so few, no adjustment was introduced in the number of occupied dwelling units for computation of eligibility rates.

Table 23 shows the eligibility and participation rates by region and urbanization. Because the sample includes 4 times as many farm households as are required for proportionate representation, counts are shown both weighted and unweighted; computations were made only with the weighted counts.

For the United States as a whole, 83 percent of the households visited provided schedules. Ninety-three percent were eligible and 89 percent of these participated. The greater the degree of urbanization, the lower the eligibility rate: 91 percent of the urban, 93 percent of the rural nonfarm, and 98 percent of the farm were eligible. Within the urbanization groups, however, there was

almost no difference by region. Participation of eligibles varied both by urbanization and region. Eighty-six percent of the urban, 93 percent of the rural nonfarm, and 91 percent of the farm eligibles participated. In general, participation in the South and Northeast was better than in the West and in the North Central Region.

In the West, 739 dwelling units were visited for the basic sample; 670 of the units were occupied. Another 138 dwelling units occupied by farm households were visited for the supplementary sample. Of this 808 total, 753 were eligible (617 in the basic and 136 in the supplementary) and 639 provided schedules (522 in the basic and 117 in the supplementary).

Of the households visited 78 percent provided schedules. Ninety-two percent were eligible and 85 percent of those participated. Eligibility rates were 91, 95, and 98 percent for urban, rural nonfarm, and rural farm households respectively. The participation rates of eligibles were 84, 91, and 82 percent.

SAMPLE APPRAISAL

One means of appraising a sample is to compare data on characteristics of sample dwelling units and their occupants with data from an independent source. For the West as a whole, table 24 shows such a comparison for Census (mostly as of 1950) and survey data. In general, the two sets of data are similar. Most of the apparent discrepancies can be explained readily. In the first place, definitions are not strictly comparable. For example, the survey concept of household is an “eating unit” whereas the Census definition refers to “occupants of a dwelling unit.” Even more important is the difference between the times of collection. The passage of 5 years between the Census year 1950 and the survey year 1955 accounts for the relatively larger urban population, the smaller proportion of persons between 15 and 29 years of age, the higher rate of home ownership, and the difference in type of cooking fuel used.

On the other hand, an unexplained discrepancy exists between the data from the farm sample and from the 1954 Census of Agriculture. The sample overrepresents farms of under 30 acres and underrepresents farms of 100- to 179-acres and 260 acres or more.

In the first report of this series, *Food Consumption of Households in the United States*, Census and survey data were compared within each of the 3 urbanization groups. Because Census data by urbanization are not available for each region, the data for all regions combined were used as a substitute for the comparison in the report. Such comparison provides only a very rough evaluation of the sample. The figures used are not shown in this report. No outstanding discrepancies were found.

Bias due to nonresponse of eligible households may be evaluated from answers to a few questions put to all households visited, whether or not they provided the necessary information for a schedule. In table 25, the characteristics of participating and of nonparticipating eligibles are compared for the West. In this survey, the eligible nonparticipants provided an unusually meager amount of information. The nonresponse rate of farm households was at least 59 percent for all except one item shown on table 25. Computations for all

eligibles are based on the assumption that the nonparticipants who did not provide data for table 25 have the same characteristics as those who did. This assumption tends to result in some understatement of the differences between the characteristics of the scheduled households and of all eligibles.

Because the sample of eligible nonparticipants was so small, and such a large proportion of them provided almost no information about themselves, it would serve no useful purpose to describe them. Moreover, they differ notably by urbanization group. In any case the eligible nonparticipants are proportionately few, and the bias introduced by their omission from the sample as a whole and from the urbanization groups as shown is negligible. Table 25 shows that the figures for participants and for all eligibles are almost identical. The slight overrepresentation of better educated wives in the farm sample probably is not important.

As long as the nonrespondent eligibles are distributed so that proportionately few of them belong in any one cell, the problem of bias of nonresponse is unimportant.

Though the number of schedules obtained in the West was small, the sample of households visited seems to represent the West, and the households furnish-

ing schedules adequately represent the eligible households. The possible exception is in size of farm where there is overrepresentation of farms of under 30 acres and underrepresentation of farms between 100 and 179 acres and those over 260 acres among those visited as compared with Census data.

Income was not reported by 10 percent of participating households of 2 or more persons in the West. These households include some that were not asked about their income because they had not been economic units the previous year, and others who refused to provide the requested information. Bias due to non-reporting of income has not been investigated for this survey. Previous studies³ indicate that although the group not asked showed characteristics of recent establishment and those refusing tended to be somewhat like the eligible non-participants, these households were not different enough or numerous enough to distort the overall food data.

* 0.5 percent or less.

^{1/} Based on weighted count (i.e., includes one-fourth of farm).^{2/} Distributed in proportion to those reporting. Percent as shown not included in total.^{3/} Multiple answers result in components adding to more than 100 percent.

Note: Components may not add to 100 percent because of rounding.

GLOSSARY

FAMILY, ECONOMIC

Defined for purposes of this study as a person living alone or a group of persons who lived together and drew from a common fund for their major items of expense. All unmarried sons and daughters who lived at home were considered part of the economic family. Other persons, related or unrelated, who lived with the family, were considered members of the economic family if they drew from the common family fund for food, housing, and automobile expenses and, in addition, for at least one other category of major expense such as clothing or medical care, or if they pooled their savings with those of the family. Family members temporarily away from home -- at school, at work, or on vacation -- were considered members of the economic family, although not residing in the dwelling unit at the time of the interview.

FAMILY, ECONOMIC, PRIMARY

There may have been more than one economic family in a household unit. If so, the one that was more closely connected with maintaining the dwelling unit was the "primary" one.

FAMILY, ECONOMIC, SECONDARY

If two or more economic families were present in a household, members of the one not considered primary (see above) were considered in the same way as boarders and hired help, i.e., they were counted in terms of 21-meal equivalents in computing household size but information on their expenses for food away from home and their income was not requested.

FAMILY SIZE

A count of members in the primary economic family during the survey week. Members temporarily away from home were included.

FARM

Defined as in the United States Census of Agriculture, 1950: Places of 3 or more acres were counted as farms if the value of agricultural products raised on them in 1954, exclusive of home gardens, amounted to \$150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1954 amounted to \$150 or more.

FARM HOUSEHOLD

A household that included a farm operator. See "Farm" and "Farm operator." Those few farm households that lived in urban places were tabulated as urban schedules.

FARM OPERATOR

As defined in the United States Census of Agriculture, 1950, i.e., a person who was responsible for the operation of farm land. He may have performed the labor himself or directly supervised it; he may have been either an individual operator or one of a group of individuals acting as partners. Con-

trol may have been through ownership, or through lease, rental, or cropping arrangement. An operator was distinguished by the decision-making function. A hired manager was considered an operator inasmuch as he was hired to make decisions and normally to do farm work. A farm laborer who worked for wages and did not make decisions was not considered a farm operator. A person who rented land to others, receiving a share of the product or cash for use of the land, was considered a landlord and not a farm operator.

FOOD EXPENDITURES, TOTAL (Table 2)

From the total expenditures for purchased food and drink (including alcoholic beverages) used at home during the week preceding the interview was subtracted an amount representing meals eaten by boarders, farm help, and members of secondary families. To this was added the respondent's estimate of expenditures made by members of primary economic families for meals and between-meal food and drinks away from home (including expenditures for such items for guests and household help).

Tips and sales tax were included in the estimates for expense for food away from home, but interviewers were instructed to exclude sales tax on food used at home.

FOODS FROM ALL SOURCES

Food purchased, home-produced, and received as gift or pay.

FOOD HOME-PRODUCED

Includes foods raised for home use and those obtained by hunting, fishing, and collecting wild fruit and nuts. Excludes home canned, home frozen, and home baked foods that were prepared from purchased ingredients. Quantities were valued at average prices paid by households of the same urbanization-region group for similar items.

FOOD OBTAINED WITHOUT DIRECT EXPENSE

Includes foods raised for home use and those obtained by hunting, fishing, and collecting wild fruit and nuts, or food received as a gift or as payment for services rendered. Quantities were valued at average prices paid by households of the same urbanization-region group for similar items.

FOOD USED AT HOME

Food "used" means food used in an economic sense (i.e. not food ingested) and includes food eaten, thrown away as waste, or fed to pets. (Dog or cat food, i.e., food not bought for human consumption, is not included.) Purchased food as well as food that was home-produced or received as a gift or in payment for goods or services is included. Food "used" covers that served at home to family members (primary and secondary), hired help, boarders or guests, or food carried from home in packed meals.

If food was prepared but not used up during the survey week (7 days preceding interview), it was not recorded. If, however, a portion of a home-prepared dish, such as a cake, was used up during the period, an estimate of that portion of each of its ingredients was reported. Also, the homemaker was reminded to include that portion of food prepared before the period covered

that was used during the survey week. Food that was canned at home during the survey week was not listed except for that quantity served during the week.

Food that was given away, for example given to neighbors or donated to church suppers, was not recorded.

Foods were generally entered on the schedule in the form in which they were brought into the kitchen. For many mixed dishes, this was not necessarily the form in which they were eaten. For example, flour that was used to make bread or cake at home appeared on the schedule as flour, but purchased baked goods were entered as bread or cake. In the same way, some eggs, fat, sugar, and milk consumed by families are reported under ice cream, canned fruits, baked goods, or in soft drinks because that is the way they entered the kitchen.

Vegetables and fruits that were canned or frozen at home were tabulated as fresh--either purchased, home-produced, or received as gift or pay as was the case. Only commercially packed products were included in tabulations of canned and frozen fruits and vegetables (contrary to the practice in earlier surveys). On the other hand, homemade jams and jellies, home-canned soups and tomato or other vegetable juices, and homemade pickles and relishes were included with commercially prepared items.

Where separate data are shown for purchased or home-produced items, the designation refers to the source of the chief ingredient. For example, the data for purchased jellies and jams for all urbanizations, rural nonfarm, and rural farm households (table 12, column 14A) include both commercially packed items and those that though homemade were made from purchased fruits.

HOUSEHOLD

Group of persons who shared family food supplies. Includes members of primary and secondary families, guests, boarders, household help, and farm help. A household did not need to include an economic family. Two or more girls, for example, sharing an apartment may have been a household yet did not constitute an economic family.

HOUSEHOLD, ELIGIBLE FOR SURVEY

One in which at least one person had 10 or more meals from household food supplies during the preceding 7 days.

HOUSEHOLD SIZE

The total number of meals served to all persons in the household from family food supplies was divided by 21 to obtain the household size in equivalent persons. The count of equivalent persons was not reduced in those households where family members omitted meals nor was it increased for between-meal snacks or additional meals, such as those served to invalids or young children.

Lunches carried from home and supplemented by purchased food were considered one-half meals; those supplemented by beverages only were counted as full meals. Refreshments served to members of the household were not counted as meals unless they served as substitutes for regular meals. Refreshments served to guests were counted according to the number of meals which they approximated.

MONEY INCOME, AFTER INCOME TAXES

Money income, after deduction of State and Federal income taxes, of all persons who were members of the primary economic family during all or any part of 1954. Income included wages and salaries paid to family members, net income from self-employment including farming, from real estate, and from boarders; interest, dividends, and mineral rights; pensions, annuities, allotments, contributions, relief payments, social security; unemployment insurance payments; and gross receipts from roomers. Excluded were lump-sum payments of inheritances and insurance policies. Farm income was the total of all farm receipts during the year (after payment of share rent to others) minus farm operating expenses. Farm operating expenses did not include purchase of land, depreciation or purchase of machinery, or building improvements. Net change in inventories of livestock or crops was not counted as income.

Some households were not classified by income, either because they did not contain an economic family during the week of the survey or for the year 1954, or because they were unable or unwilling to give the information regarding income.

MILK FAT, SUMMARY MEASURE

Approximately the total quantity of milk fat (in pounds) in the milk, cream, ice cream, and cheese used by households in a week. For the basis of most of the factors used in obtaining this total in table 5, see *Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products*, U. S. Department of Agriculture, Production and Marketing Administration, May 1952.

MILK SOLIDS-NOT-FAT, SUMMARY MEASURE

Approximately the total quantity of milk solids-not-fat in the milk, cream, ice cream, and cheese used by households in a week. For the basis of most of the factors used in obtaining this total in table 5, see *Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products*, U. S. Department of Agriculture, Production and Marketing Administration, May 1952.

MILK TOTAL--NUTRITION EQUIVALENT, SUMMARY MEASURE

Approximately the quantity of fluid milk to which various dairy products (except butter) are equivalent in calcium. The chief source of data on the calcium content of the various dairy products was *Composition of Foods -- Raw, Processed, Prepared*, U. S. Department of Agriculture, Agriculture Handbook No. 8, June 1950.

NOT CLASSIFIED BY INCOME

Households that were not economic families for the week of the survey or for the year 1954 and households that were unable or unwilling to give information about income.

REGIONS

The Census of Population classification was used. The States in each of the regions are as follows:

Northeast

Connecticut
Maine
Massachusetts

New Hampshire
New Jersey
New York

Pennsylvania
Rhode Island
Vermont

North Central

Illinois
Indiana
Iowa
Kansas

Michigan
Minnesota
Missouri
Nebraska

North Dakota
Ohio
South Dakota
Wisconsin

South

Alabama
Arkansas
Delaware
District of Columbia
Florida
Georgia

Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma

South Carolina
Tennessee
Texas
Virginia
West Virginia

West

Arizona
California
Colorado
Idaho

Montana
Nevada
New Mexico
Oregon

Utah
Washington
Wyoming

URBANIZATION

Census of Agriculture definitions of urban, rural nonfarm, and rural farm were used. *Urban* households lived in communities of 2,500 or more persons or in the fringe areas around cities of 50,000 or more. *Farm* households were those that included a farm operator, a person responsible for the operation of a farm, either performing the labor himself or directly supervising it. A farm was defined as in the U. S. Census of Agriculture, i.e. a place of 3 or more acres with value of farm products raised (for sale or for home use exclusive of home gardens) amounting to \$150 or more in 1954 or a place of less than 3 acres with value of sales of agricultural products amounting to \$150 or more. See "Farm" and "Farm operator." Those few farm households that lived in urban places were tabulated as urban schedules. *Rural nonfarm* households were those living outside of urban places that were not classified as rural farm.

Diets of families of employed wage earners and clerical workers in cities. (1934-37 data.) H. K. Stiebeling and E. F. Phipard. U. S. Dept. Agr. Cir. 507, 141 pp., illus., 1939

Family food consumption and dietary levels. Consumer Purchases Study. (Farm Series.) Five Regions. (1935-36 data.) H. K. Stiebeling, D. Monroe, C. M. Coons, and others. U. S. Dept. Agr. Misc. Pub. 405, 393 pp., illus., 1941

Family food consumption and dietary levels. Consumer Purchases Study. (Urban and Village Series.) Five Regions. (1935-36 data.) H. K. Stiebeling, D. Monroe, E. F. Phipard, and others. U. S. Dept. Agr. Misc. Pub. 452, 268 pp., illus., 1941

Family food consumption in the United States, spring 1942. U. S. Bureau of Human Nutrition and Home Economics. U. S. Dept. Agr. Misc. Pub. 550, 157 pp., 1944

Diets of families in the open country--a Georgia and an Ohio county, summer 1945. S. F. Adelson and E. C. Blake. U. S. Dept. Agr. Misc. Pub. 704, 90 pp., illus., 1950

Family food consumption in three types of farming areas of the South. I. An analysis of 1947 food data. D. Dickins, B. Gillaspie, A. M. Moser, and others. South. Coop. Ser. Bul. 7, 142 pp., illus., 1950

Family food consumption in three types of farming areas of the South. II. An analysis of weekly food records, late winter and early spring, 1948. A. M. Moser, W. T. Dean, B. Gillaspie, and others. South. Coop. Ser. Bul. 20, 207 pp., illus., 1951

Food consumption of urban families in the United States, with an appraisal of methods of analysis (1948 data.) F. Clark, J. Murray, G. S. Weiss, and E. Grossman. U. S. Dept. Agr., Agr. Inform. Bul. 132, 203 pp., illus., 1954

Food consumption of farm families, Meeker and Wright counties, Minnesota, 1950. F. Clark and C. LeBovit. U. S. Dept. Agr., Agr. Inform. Bul. 127, 112 pp., illus., 1955

Food expenditures, preservation and home production by rural families in the North Central Region, 1951-52. M. Orshansky, E. C. Blake, and M. A. Moss. U. S. Dept. Agr., Agr. Inform. Bul. 113, 86 pp., illus., 1956

Food consumption and dietary levels of rural families in the North Central Region, 1952. M. Orshansky, C. LeBovit, E. C. Blake, and M. A. Moss. U. S. Dept. Agr., Agr. Inform. Bul. (in press)
